Hello everyone,
Greetings.

Our weekly group meeting is **Friday** at 11:00 AM. We will meet in **CARES conference room**.

Nowadays, data analysis and related techniques are very hot in air pollution and particle emission research, a lot of our lab-mates are using some of these knowledge or very interested on these topics, therefore, I am very excited to inform you that we have a special guest speaker this week.

Dr. Supraja Gurajala will generously give us a presentation of the topic of "Challenges in monitoring air quality using social media data" in our group meeting, and share some knowledge of how they use these big data set for predictions and some experiences of the "challenges" they are facing.

I hope you can get some ideas of data analysis from her and enjoy the end of this semester.

Thus, our original speakers will automatically switch to next week, but if you still want to present this week, let me know I will arrange your presentation.

Hope to see you there on Friday.

A reminder will send on Thursday.
Thanks.
Have a good one.
